PROFESSIONAL SUMMARY

Software Engineer with hands-on experience in full-stack, mobile, and AI development. MSc in Artificial Intelligence graduate from APU, Malaysia. Originally from New Delhi, India, with a strong academic foundation including schooling at RPVV Delhi. Proven ability to design and ship production-ready applications across web, mobile, and cloud platforms. Experienced with React Native, React, AWS, and LLM integration. Strong collaborator who thrives in agile, cross-functional teams building impactful software.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, Python, Java, Kotlin, C++, C#, SQL, HTML, CSS
Frameworks	React, React Native (Expo), Tauri, Astro, Node.js, Express, Flutter, Laravel, Tailwind CSS, NativeWind, Framer Motion
AI / ML	TensorFlow, Keras, Scikit-learn, LLMs, AWS Bedrock (Llama 3), RNN / LSTM, Prompt Engineering
Cloud & Data	AWS (EC2, S3, RDS, EBS, X-Ray), Supabase (Realtime, Storage, RLS), Firebase, PostgreSQL, Google Cloud Platform, Vercel
Tooling & DevOps	Git, GitHub Actions, CI/CD, pnpm monorepos, EAS Build, Android Studio, VS Code, JetBrains, Jupyter
Methodologies	Agile / Scrum, OOP, Design Patterns, REST API Integration, SDLC, SEO, RAD

EXPERIENCE

Software Engineer Intern | *Jalal Creative Solutions Bhd. Ltd.*

Oct 2023 – Feb 2024

- Architected and deployed a full car-rental web application on WordPress, integrating booking and payment APIs that reduced manual admin effort by streamlining the end-to-end reservation flow.
- Engineered custom JavaScript and CSS plugin modifications to meet specific business requirements, improving platform stability and UX across all device sizes.
- Boosted organic search visibility through an SEO strategy spanning keyword research, metadata optimisation, and targeted content, and improved page load performance via JavaScript preloading and browser caching, validated through Google PageSpeed Insights.

Freelance Mobile App Developer

Feb 2025 – May 2025

- Designed a React Native mobile app for voice-based employee time-tracking, featuring audio capture, timestamped activity logs, and structured cloud storage.
- Delivered a reliable, user-friendly interface that achieved consistent adoption among end users for daily workflow logging.

Freelance AI & Frontend Developer

Nov 2025 – Dec 2025

- Conducted systematic prompt engineering and evaluation for a Grok-powered LLM—testing accuracy, consistency, and edge cases—and delivered actionable reports that improved model output quality.
- Built a responsive landing page in HTML and CSS, ensuring cross-browser compatibility and clean, accessible layout.
- Collaborated directly with stakeholders to iteratively refine both the AI testing workflows and frontend deliverables.

Freelance Web Developer | *Pebbles & Petals Pre-School*

2026

Astro · TypeScript · Tailwind CSS · Vercel

- Designed and built a 7-page responsive marketing website for a preschool, from client discovery and design exploration through production deployment on a custom domain.
- Architected a JSON-driven content layer separating copy, pricing, and staff data from presentation, enabling non-technical content updates without touching component code.
- Implemented interactive UI components in vanilla JS with zero dependencies — an infinite-loop image carousel with center-focus scaling, an image lightbox, and accessible modals — keeping the bundle lightweight for low-bandwidth mobile users.
- Built build-time asset discovery using Node's filesystem APIs so new photos and staff headshots are published by adding files, eliminating manual configuration.
- Configured DNS, SSL, and CI/CD deployment via GitHub → Vercel, plus web analytics.

Freelance Mobile App Developer | Kedai — Retail Convenience Store

2026

React Native (Expo) · TypeScript · Supabase · NativeWind

- Built and shipped a cross-platform inventory and storefront app that lets the store owner manage stock while customers browse live product availability and pricing without an account.
- Designed a dual-role architecture in a single codebase: session-gated navigation exposes inventory management to the authenticated owner while anonymous users get a read-only catalog — enforced server-side with Postgres Row Level Security rather than client checks.
- Implemented realtime stock synchronisation over Supabase Realtime so inventory changes propagate to customer devices within seconds, plus image upload via camera/gallery to Supabase Storage with orphan-file cleanup.
- Modelled a self-seeding shared product catalog with generated-column normalisation and unique constraints for deduplication, enabling one-tap product entry that improves as more items are added.

PROJECTS & HACKATHONS

LockedIn — Desktop Focus & Time-Tracking App

Tauri · React · TypeScript · Framer Motion · Tailwind CSS

- Building a cross-platform desktop app for category-based time tracking with stopwatch, countdown, and Pomodoro modes, integrated task management, and session analytics — targeting a public launch under Coderift Technologies.
- Built a pnpm monorepo (types / utils / notifications packages) with a platform-agnostic core, enabling the same business logic to back a future web or mobile client.
- Designed a persistent event-logging system to power activity history, "last used" tracking, and undo functionality, and a factory-pattern notification layer decoupled from any single platform's delivery mechanism.
- Set up CI/CD via GitHub Actions to cross-compile Windows installers from a macOS development environment.

AFMS — All-in-One Financial Management App

- Built a React Native (Expo) e-wallet and subscription-tracking app letting users consolidate multiple financial accounts in one interface, with Kinde authentication and Supabase persistence.

2025 Great Malaysia AI Hackathon — Fake News Detector

- Built an LLM-powered fake news detection system using AWS Bedrock (Llama 3) and real-time Wikipedia scraping, users paste a URL and receive an instant credibility verdict.

EDUCATION

Asia Pacific University of Technology and Innovation (APU), Kuala Lumpur, Malaysia

MSc in Artificial Intelligence

2025 – 2026

BSc (Hons) in Software Engineering

2021 – 2025

Rajkiya Pratibha Vikas Vidyalaya (RPVV), New Delhi, India

Secondary & Senior Secondary Education

Completed 2021

ADDITIONAL

Languages: English (Bilingual), Urdu (Native), Hindi (Bilingual)
Source Projects

Interests: Chess, Game Development, Open-
